More is more when it comes to students' vocabulary knowledge, and in *The Vocabulary Playbook*, educators in K–12 get ideas for transforming all children into curious, capable word learners. The key? Put away the word-list mindset, and embrace active modeling, peer work, and independent practice. Five modules offer direct instruction and effective routines that show how to:

- Select and teach only the most high-utility, transferable words that are ripe for discussion
- Use direct instruction to model word-solving in each content area
- Teach morphology in ways that invite students to apply understandings in reading, writing, talk, and listening
- Turn academic word-learning into a relevant experience with peer collaboration activities
- Create a culture of word consciousness by emphasizing concepts, modeling curiosity, and offering “low-risk” routines that make it okay to not yet know

Driving while texting is dangerous, but so is sending our students on the digital highway without critical thinking skills.

Critical thinking and online reading need to go hand in hand—but they often don't. Students click, swipe, and believe because they don't know how to do otherwise. At times, so do we. And that's a problem. *Fighting Fake News* combats this challenge by helping you model how to read, myth-bust, truth-test, and respond in ways that lead to wisdom rather than reactivity.

We are still in the wild west era of the digital age, scrambling to impart a safer, ethical framework for evaluating information. Thankfully, it distills to one mission: teach students (and ourselves) how to think critically, and we will forever have the tools to fight fake news.

Let this new series be your roadmap to procedural fluency in math and move beyond the path of doing worksheets and drills with only a focus on the answer.

Fluency in mathematics is more than adeptly using basic facts or implementing algorithms. It is not about speed or recall. Real fluency is about choosing strategies that are efficient, flexible, lead to accurate solutions, and are appropriate for the given situation. Developing fluency is also a matter of equity and access for all learners.
